A compact Writerly publishing example

Contents

1 Small arguments **1**

2 References and code **1**

A Implementation notes **1**

1 Small arguments

A short document can still exercise a serious publishing pipeline. It can carry metadata, stable references, numbered structures, mathematics, and source-aware transformations.

Definition 1.1. *A compact model keeps enough structure to explain an idea without reproducing every detail of the system it represents.*

$$f(n+1) = 2f(n) + 1 \tag{1}$$

> This callout is renamed by a local desugarer whose regular expression is compiled once, before the tree walk begins.

2 References and code

The argument in 1 uses the model from 1.1 and the recurrence in 1.

```
pub fn next(value) {
  2 * value + 1
}
```

A Implementation notes

The appendix is ordinary Writerly structure. Each target decides how to number, style, and serialize it.
